DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 3-7, 9-12 and 15-16 are, rejected under 35 U.S.C. 102(e) as being anticipated by Apelman. The plurality of sensing switches is readable on elements 3 and 14. Element 11 is readable on the transmitter. The auto-dialer is readable on the telephone processor and dialer. Element 8 defines the latching mechanism for the solenoid valve 10.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.

Art Unit: 3753

4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Apelman in view of Fisher et al. The above claims are readable on the patent to Apelman with the single exception of having a hand-held or portable remote control unit comprising a switch and transmitter. The patent to Fisher et al teaches the above exception. In view of the teaching of Fisher, it would be obvious to one of ordinary skill in the art, at the time the invention was made, to provide the above exception to the device of fisher et al or Apelman as taught by elements 18, 94, 160, 162 and 164, if desired. This concept is well known in the art (see column 8, lines 28-65). Such teaching provides no unobvious or unexpected result.

Claims 8 and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Apelman in view of Hwang et al al. The above claims are readable on the patent to Apelman with the single exception of having a gas-sensing switch. The patent to Hwang et al teaches the above exception. In view of the teaching of Hwang et al, it would be obvious to one of ordinary skill in the art, at the time the invention was made, to provide the above exception to the device of Apelman as taught by elements 15 and 16, if desired. This concept is well known in the art. Such teaching provides no unobvious or unexpected result.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
